

EXPEDITION3: A Phase 3 Trial of Solanezumab in Mild Dementia due to Alzheimer's Disease

Lawrence S. Honig, MD, PhD

On behalf of the EXPEDITION3 Study Team

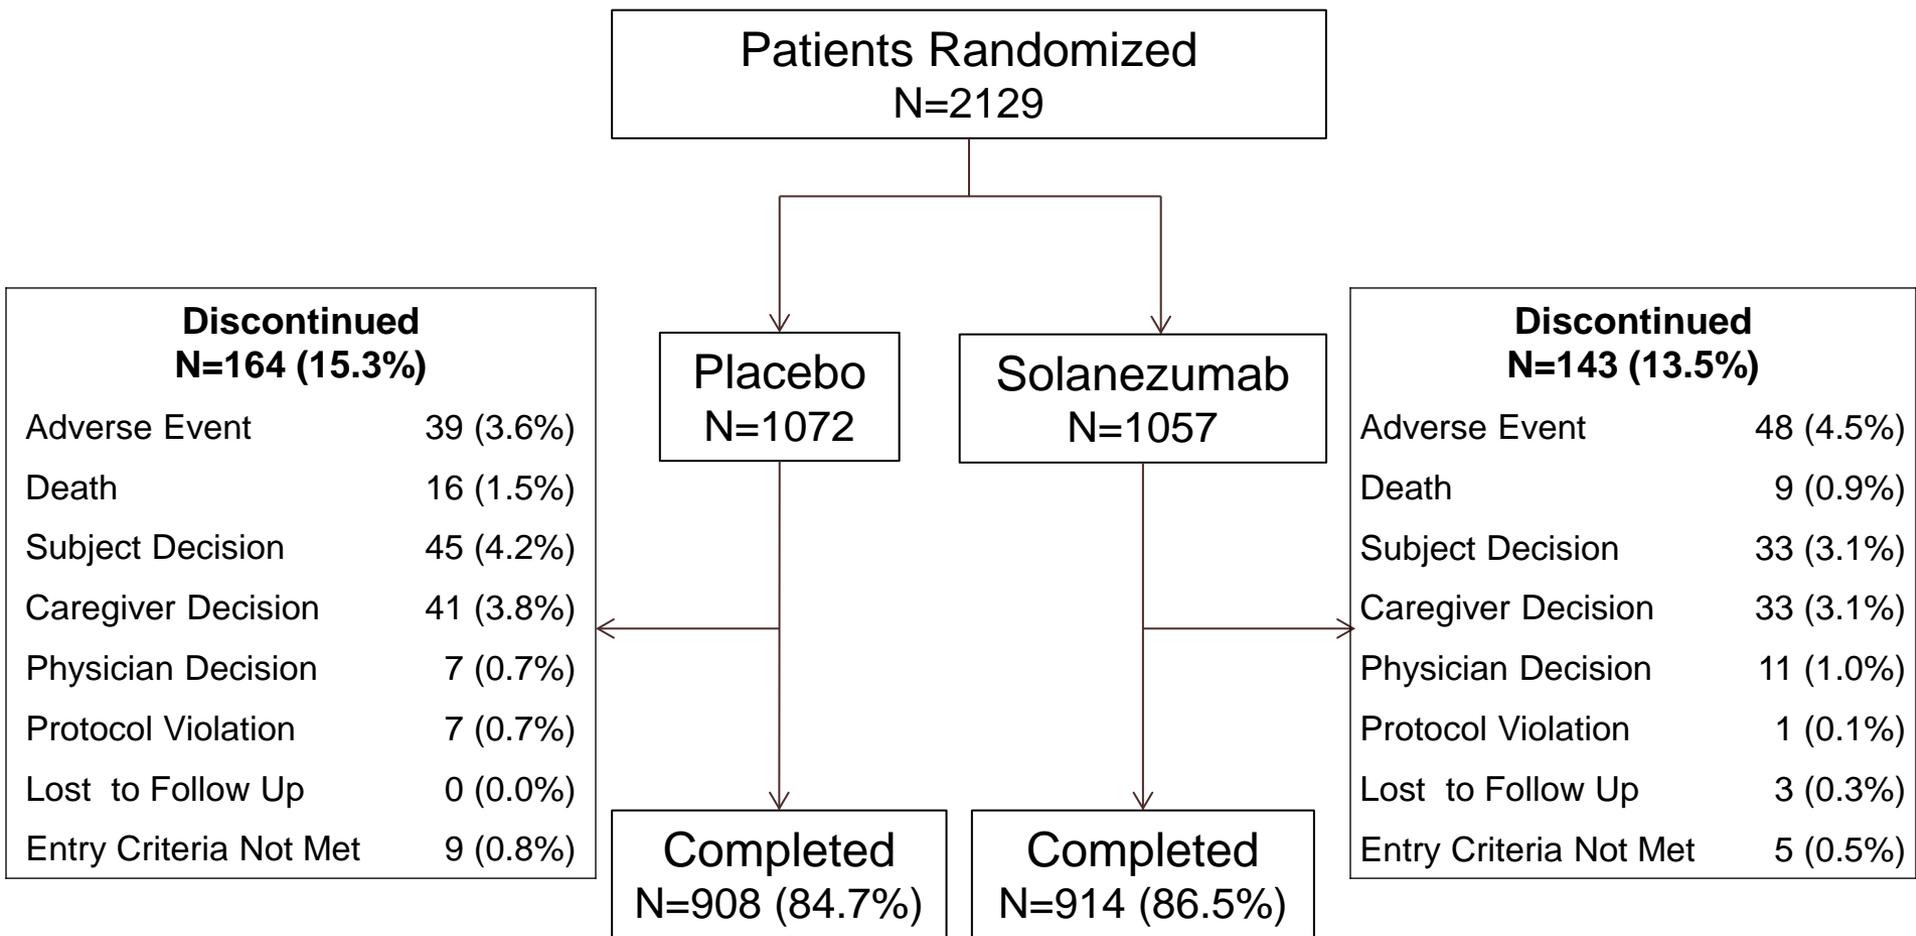

Lilly

Disclosure Statement

- ◆ I will discuss investigational use only.
- ◆ Dr. Honig has received support as a consultant/steering committee member from Forum, Fujirebio, Lundbeck, and Eli Lilly.
- ◆ Dr. Honig has received research funding as an investigator for AstraZeneca, Bristol-Myer Squibb, Forum, Genentech, Janssen, Eli Lilly, Lundbeck, Pfizer, Roche, TauRx, vTv.
- ◆ EXPEDITION3 is funded by Eli Lilly and Company.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

Patient Disposition

Abbreviations: AD=Alzheimer's disease; ECG=electrocardiogram; N=number.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

Study Design for EXPEDITION3

- ◆ Study LZAX (NCT01900665): double-blind, Phase 3, randomized to solanezumab (400 mg per dose) or placebo every 4 weeks for 80 weeks; optional open-label extension
- ◆ Age 55 to 90 years
- ◆ Probable AD by NINCDS/ADRDA criteria¹
- ◆ Amyloid positive by F18 florbetapir PET or CSF A β ₁₋₄₂
- ◆ MMSE score 20-26 inclusive
- ◆ On stable standard of care therapy (drug and non-drug)
 - Acetylcholinesterase inhibitors and/or memantine
 - Continued concomitant medication use allowed throughout study
- ◆ Conducted in 11 countries at 210 sites

Abbreviations: NINCDS/ADRDA=National Institute of Neurological and Communicative Disorders and Stroke/Alzheimer's Disease and Related Disorders Association; PET=positron emission tomography; CSF=cerebrospinal fluid; MMSE=Mini Mental State Exam.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

Baseline Demographics

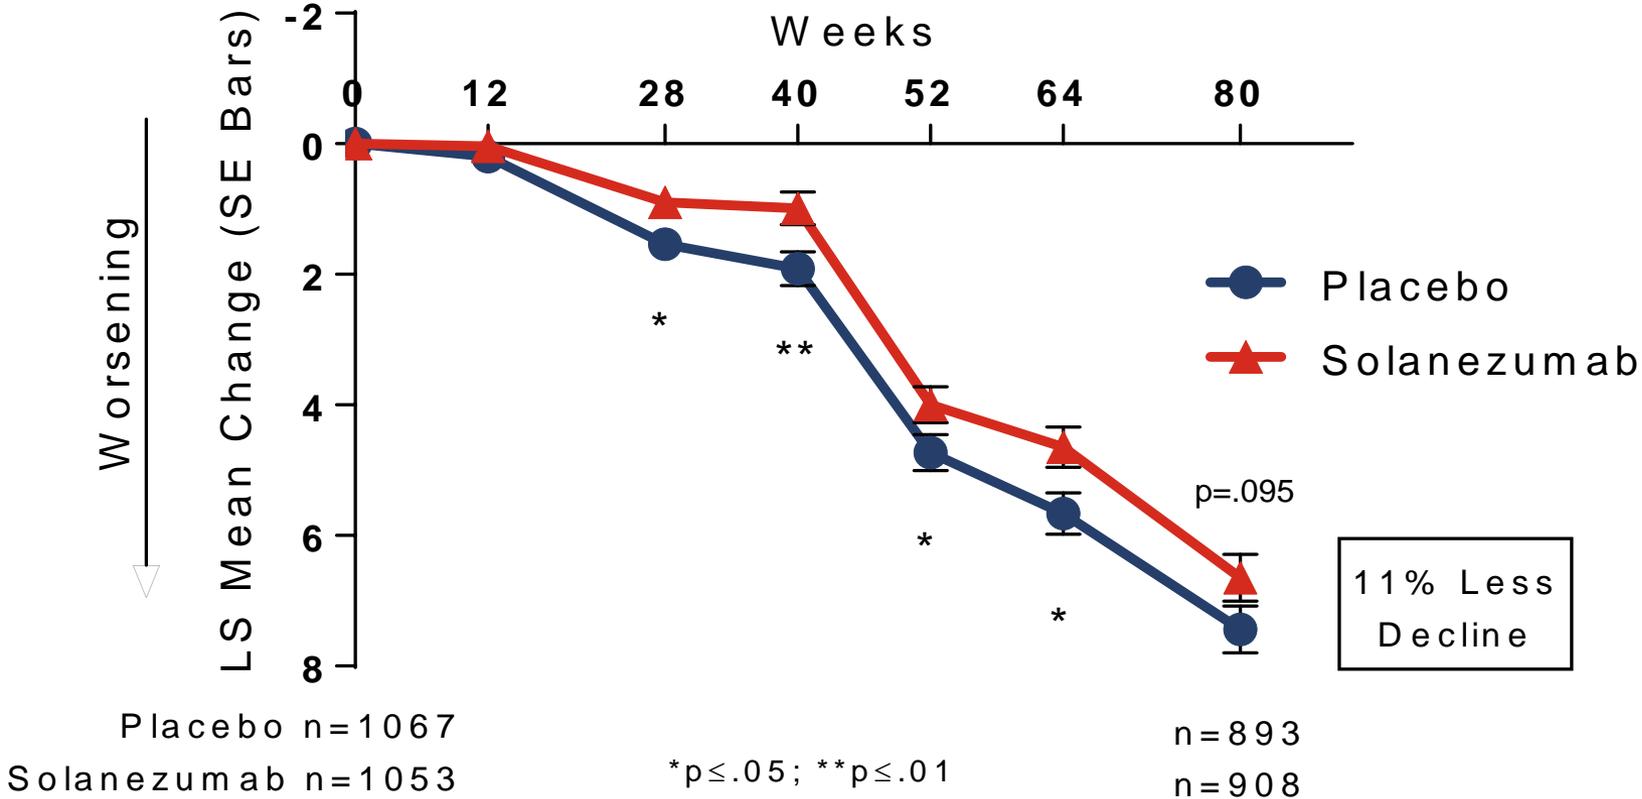

Demographic	Placebo N=1072	Solanezumab N=1057	p-value
Age, years, mean (SD)	73.3 (8.0)	72.7 (7.8)	.073
Female, n (%)	631 (58.9%)	600 (56.8%)	.335
Race, n (%)			.758
White	894 (90.7%)	878 (90.5%)	
Black or African American	19 (1.9%)	14 (1.4%)	
Asian	71 (7.2%)	75 (7.7%)	
APOE ε4 carriers, n (%)*	685 (66.3%)	712 (69.3%)	.144
Education, years, mean (SD)	13.7 (3.8)	13.7 (3.7)	.906
Symptom onset, years, mean (SD)	4.3 (2.6)	4.2 (2.5)	.413
Diagnosis, years, mean (SD)	1.6 (1.7)	1.5 (1.6)	.132
AChEI and/or memantine use, n (%)	856 (79.9%)	822 (77.8%)	.244

*Based on number of patients with available APOE status (placebo N=1033; solanezumab N=1027).

Abbreviations: AD=Alzheimer's disease; n=number; SD=standard deviation; APOE=apolipoprotein E.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

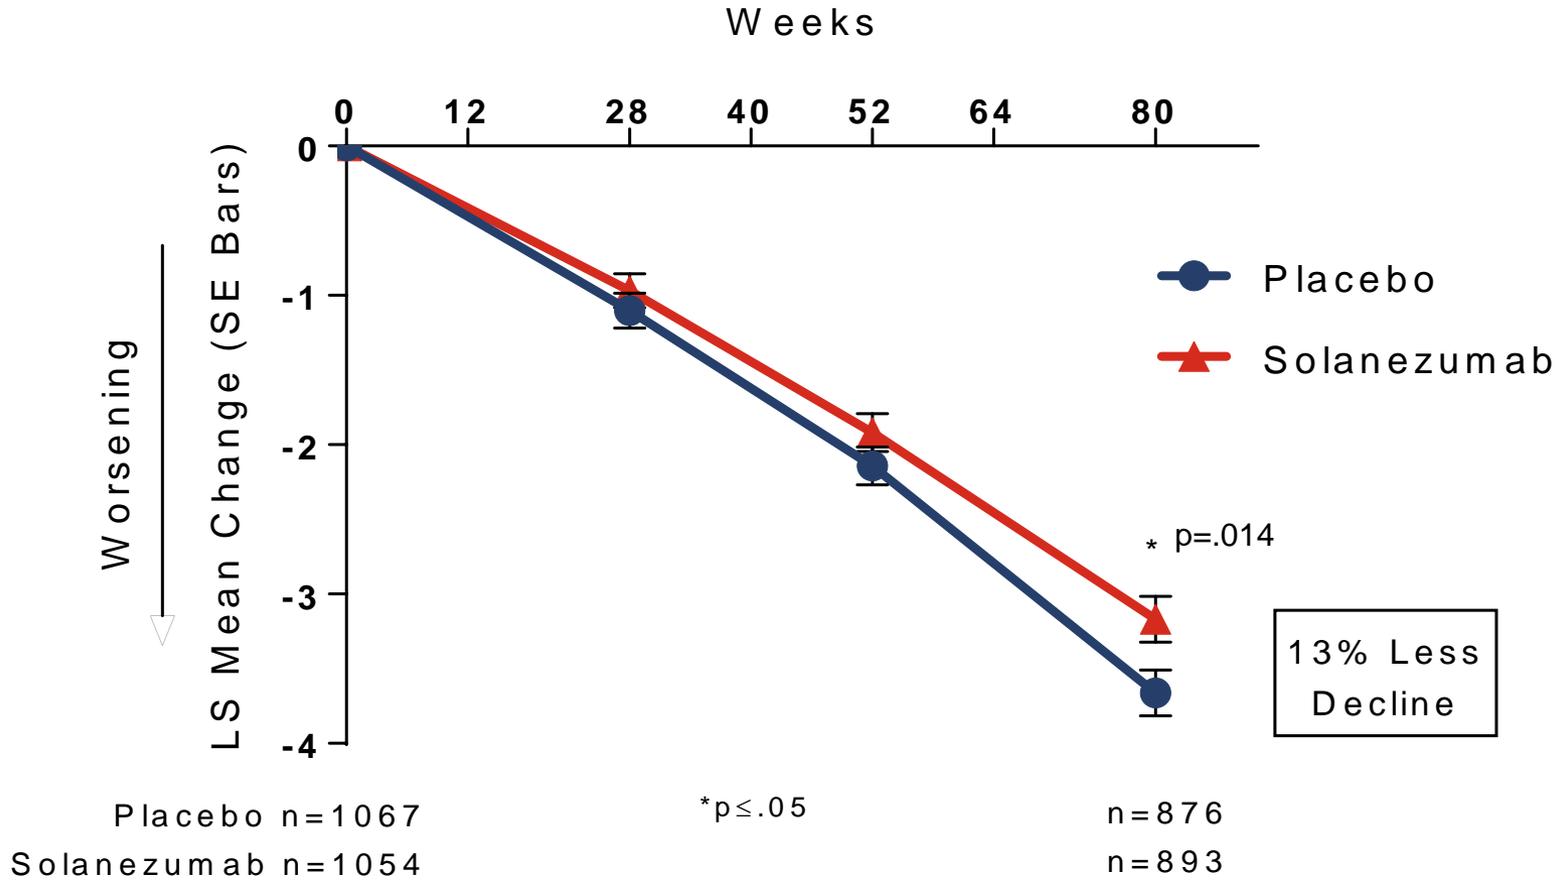

Change in Cognition - ADAS-Cog₁₄ (Primary)

Abbreviations: AD=Alzheimer's disease; ADAS-Cog₁₄=AD Assessment Scale-Cognitive 14-item Subscale; LS=least squares; n=number; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

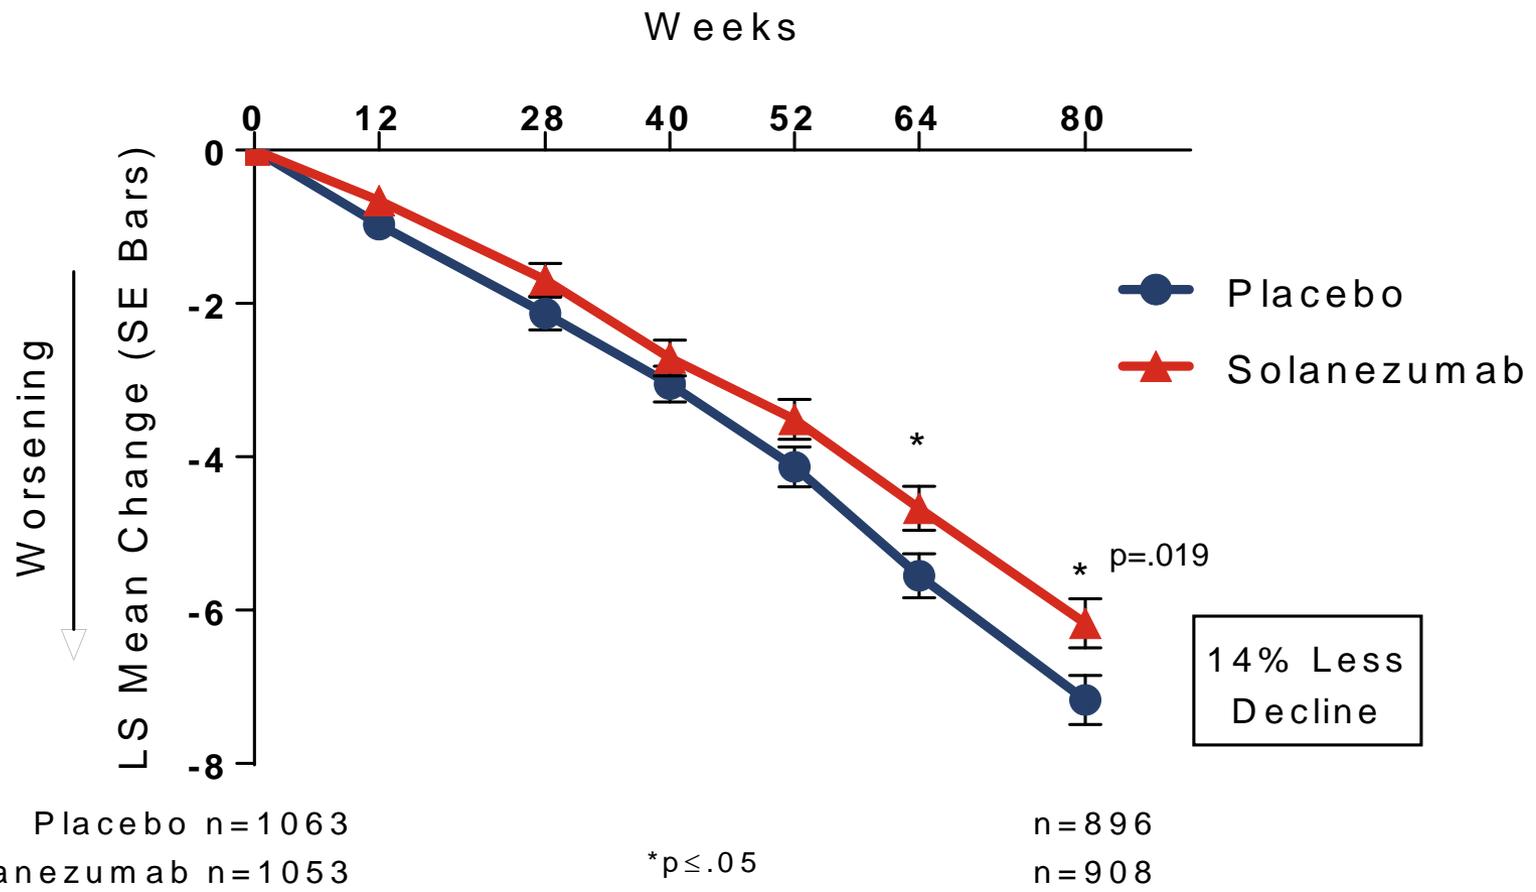

Change in Cognition - MMSE

Abbreviations: AD=Alzheimer's disease; LS=least squares; MMSE=Mini-Mental State Examination; n=number; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

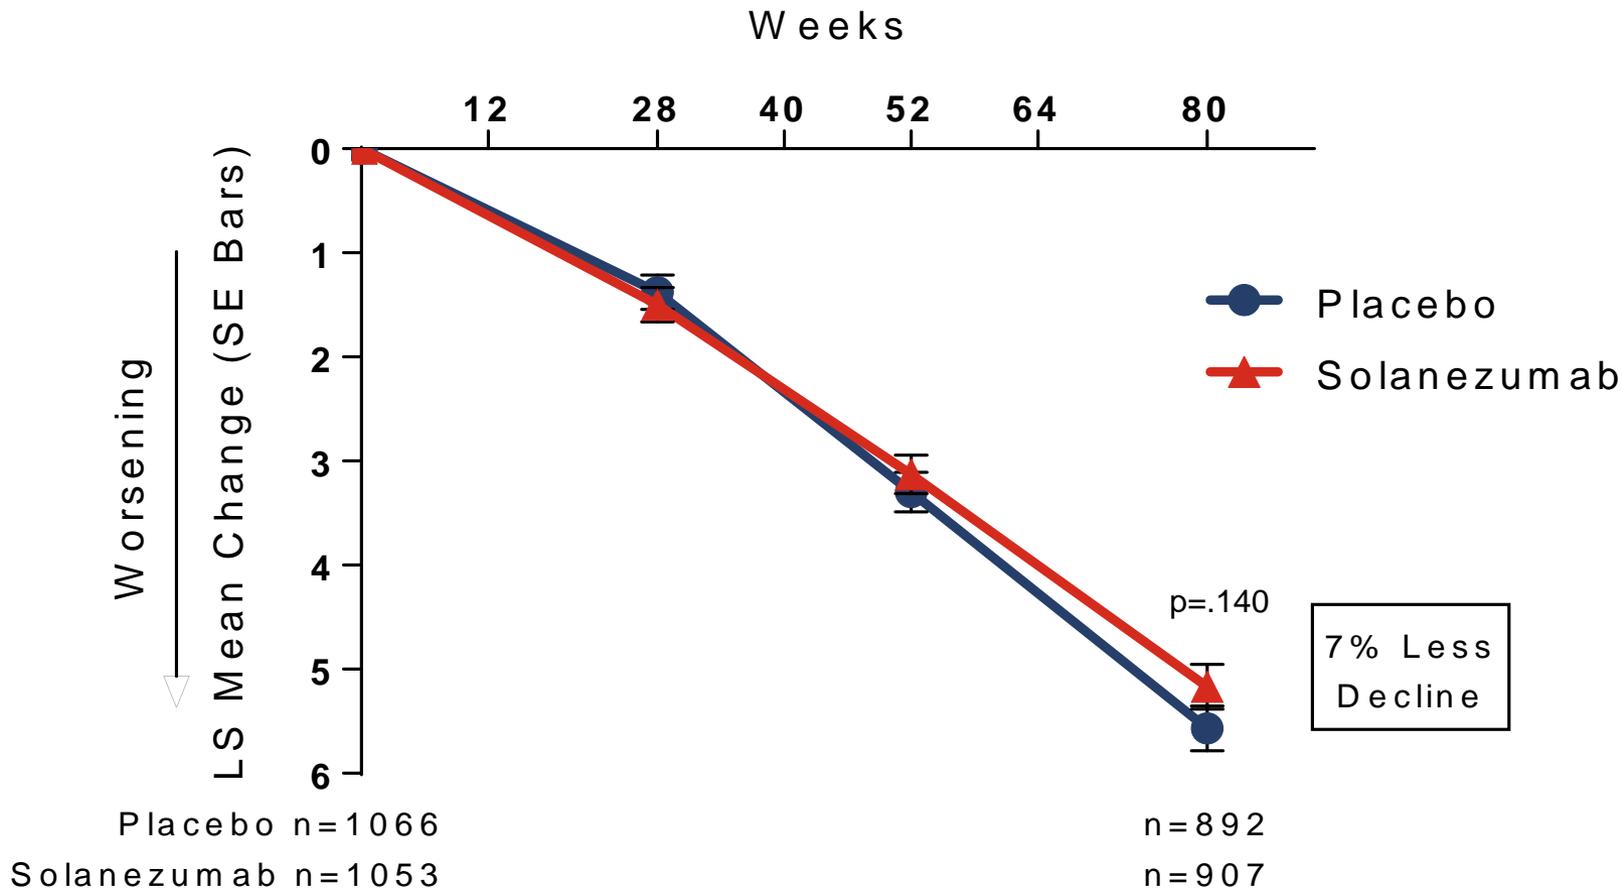

Change in Complex ADLs - ADCS-iADL

Abbreviations: AD=Alzheimer's disease; ADL=Activities of Daily Living; ADCS-iADL=AD Cooperative Study-Instrumental Activities of Daily Living; LS=least squares; n=number; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

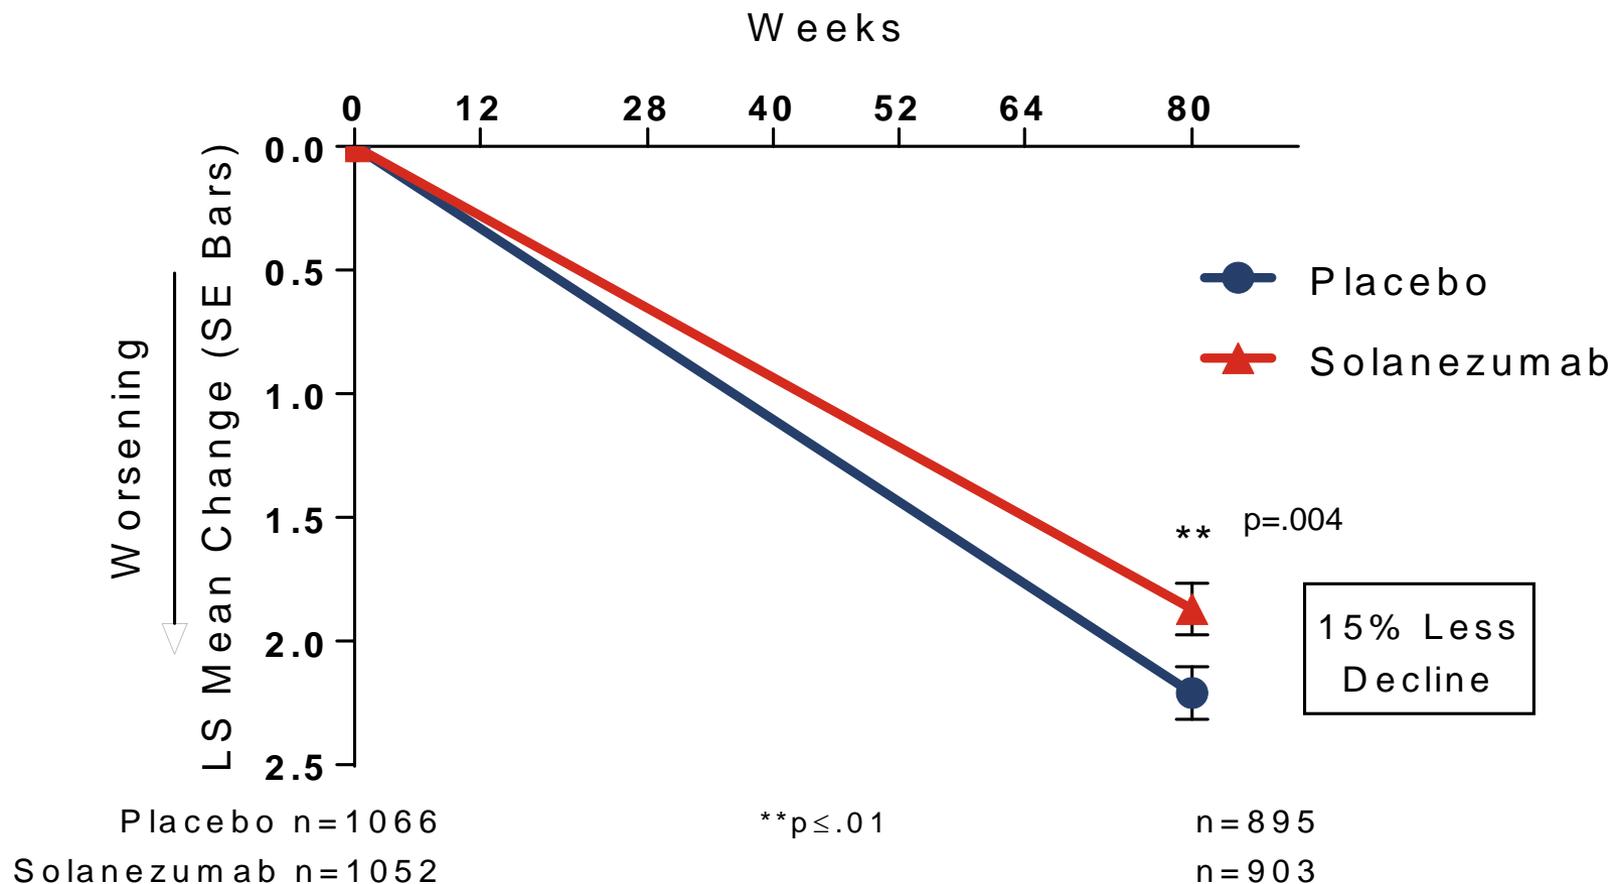

Change in Complex ADLs - FAQ

Abbreviations: AD=Alzheimer's disease; ADL=Activities of Daily Living; FAQ=Functional Activities Questionnaire; LS=least squares; n=number; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

Change in Composite Scale - CDR-SB

Abbreviations: AD=Alzheimer's disease; CDR-SB=Clinical Dementia Rating Sum of Boxes; LS=least squares; n=number; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

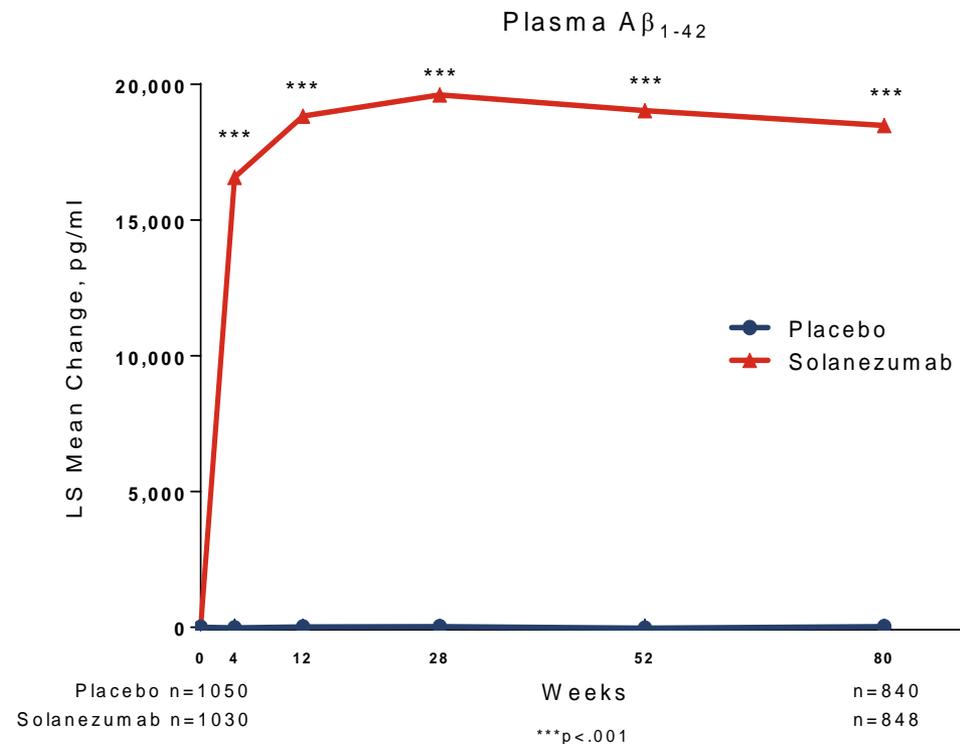

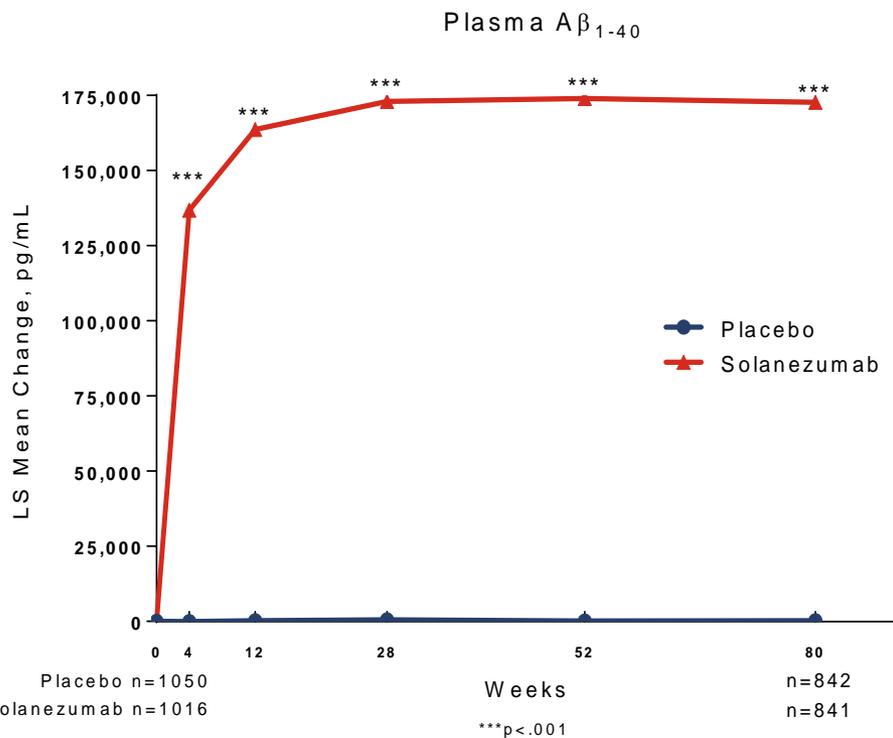

Change in Cognition and ADLs at 80 Weeks

	LS Mean Change (SE) at 80 Weeks		Less Decline	p-value
	Placebo	Solanezumab		
ADAS-Cog₁₄	7.44 (0.36)	6.65 (0.36)	11%	.095
MMSE	-3.66 (0.16)	-3.17 (0.15)	13%	.014
ADCS-iADL	-7.17 (0.32)	-6.17 (0.32)	14%	.019
ADCS-ADL	-8.77 (0.39)	-7.42 (0.39)	15%	.009
FAQ	5.57 (0.21)	5.17 (0.21)	7%	.140
CDR-SB	2.21 (0.11)	1.87 (0.10)	15%	.004

Abbreviations: AD=Alzheimer's disease; ADL=Activities of Daily Living; ADAS-Cog₁₄=AD Assessment Scale-Cognitive 14-item Subscale; ADCS-ADL=AD Cooperative Study-Activities of Daily Living; CDR-SB=Clinical Dementia Rating Sum of Boxes; FAQ=Function Activities Questionnaire; iADRS=Integrated AD Rating Scale; LS=least squares; n=number of patients with evaluable 80-Week scale data; N/A=not applicable; MMSE=Mini-Mental State Examination; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

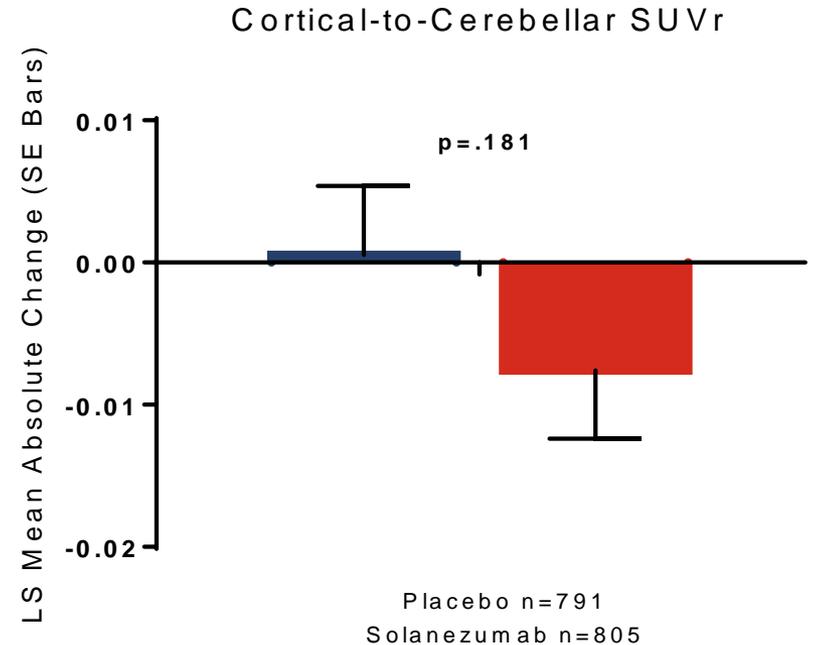

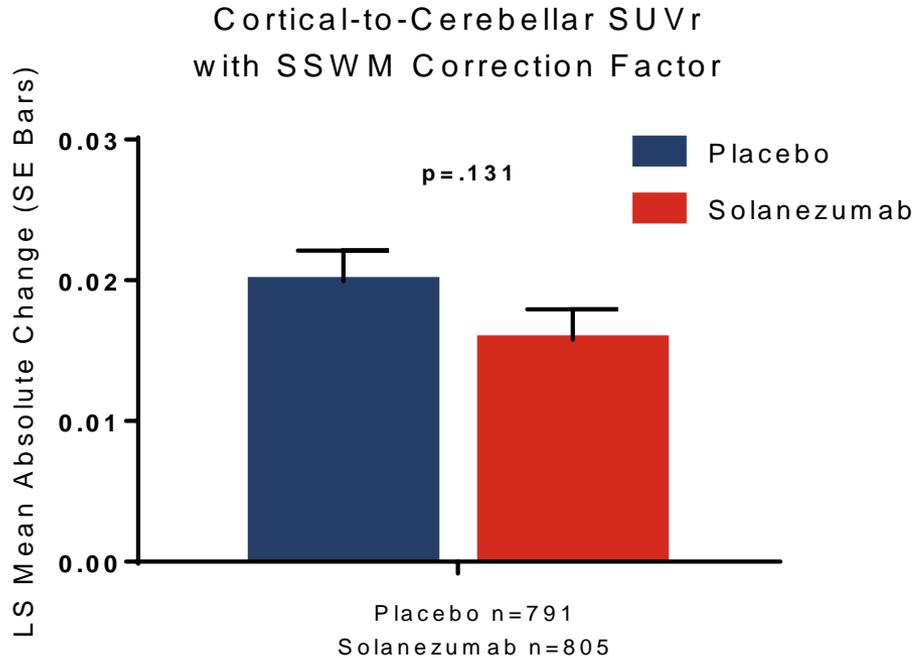

Plasma Changes in $A\beta_{1-40}$ and $A\beta_{1-42}$

Abbreviations: AD=Alzheimer's disease; LS=least squares; n=number.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

Florbetapir PET Change in Amyloid Deposition

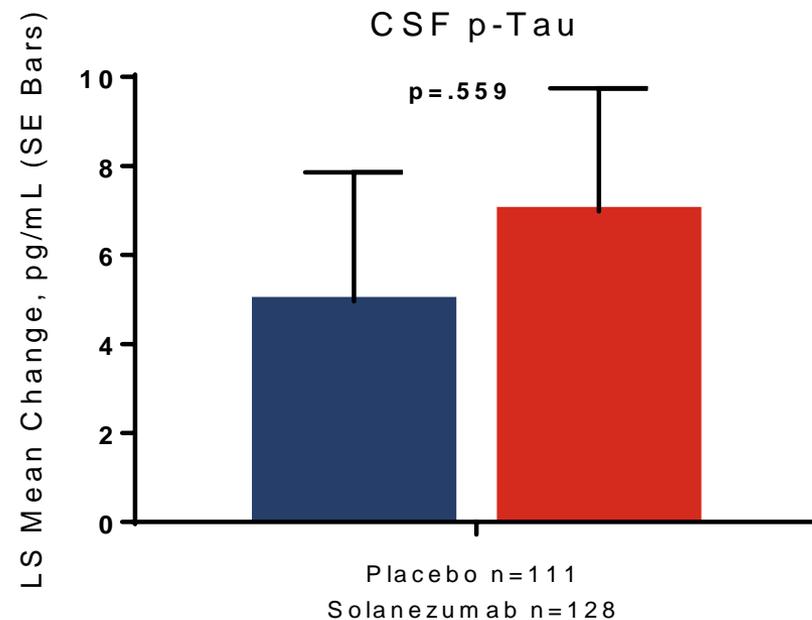

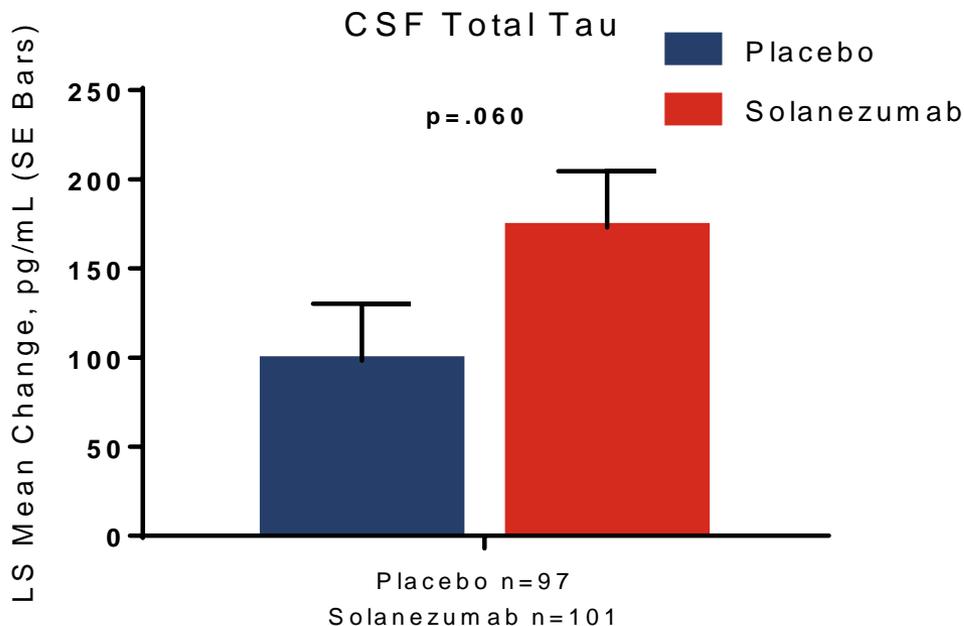

The cortical SUV is a composite summary that consists of the following 6 regions: medial orbital frontal, anterior cingulate, parietal, temporal, posterior cingulate, and precuneus

Abbreviations: AD=Alzheimer's disease; PET=positron emission tomography; LS=least squares; n=number; SUVr=Standard Uptake Value ratio; SE=standard error; SSWM=subject-specific white matter.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

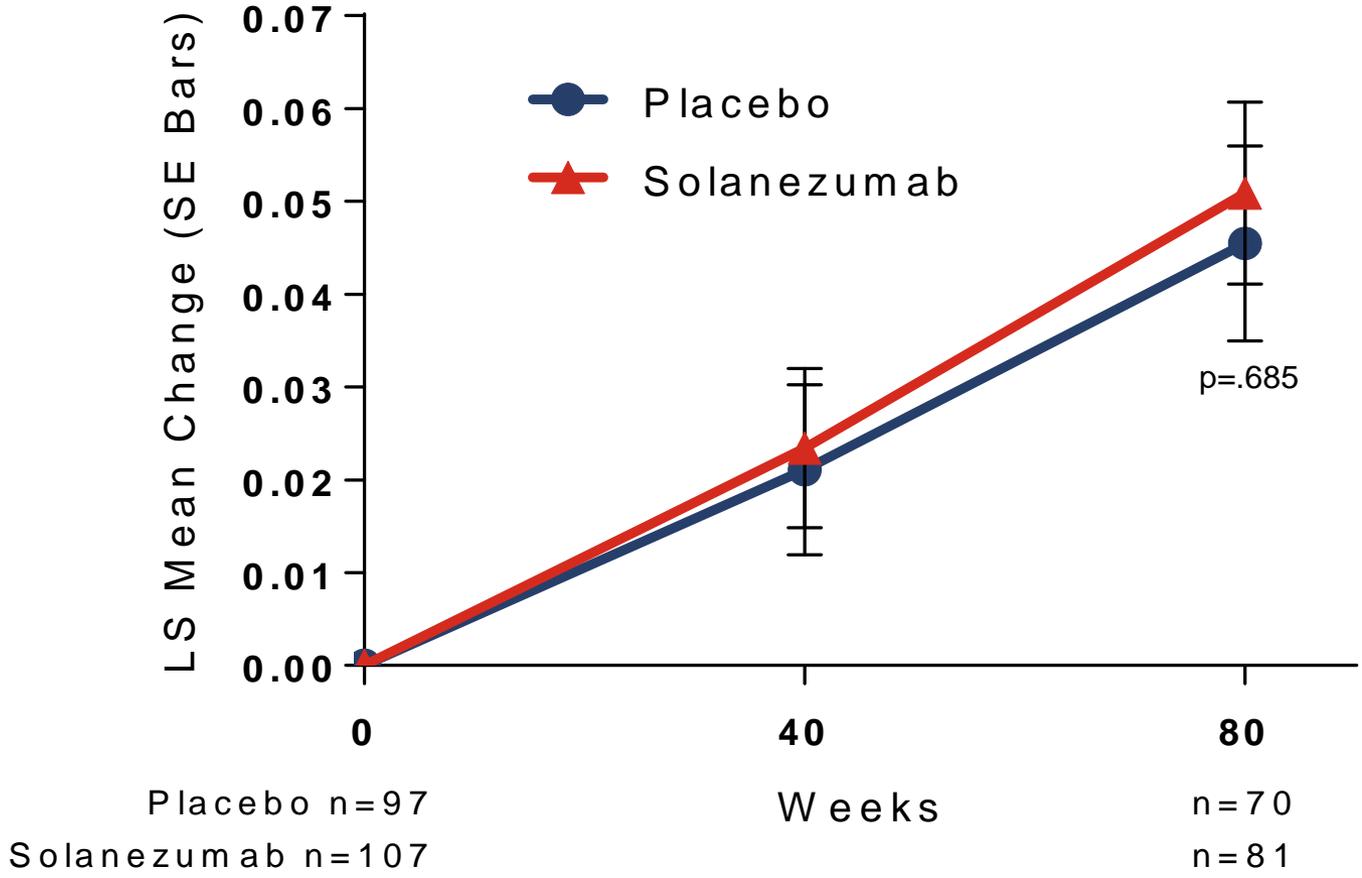

CSF Changes in Total Tau and p-Tau

Abbreviations: AD=Alzheimer's disease; CSF=cerebrospinal fluid; LS=least squares; n=number, p-tau=phosphorylated tau; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

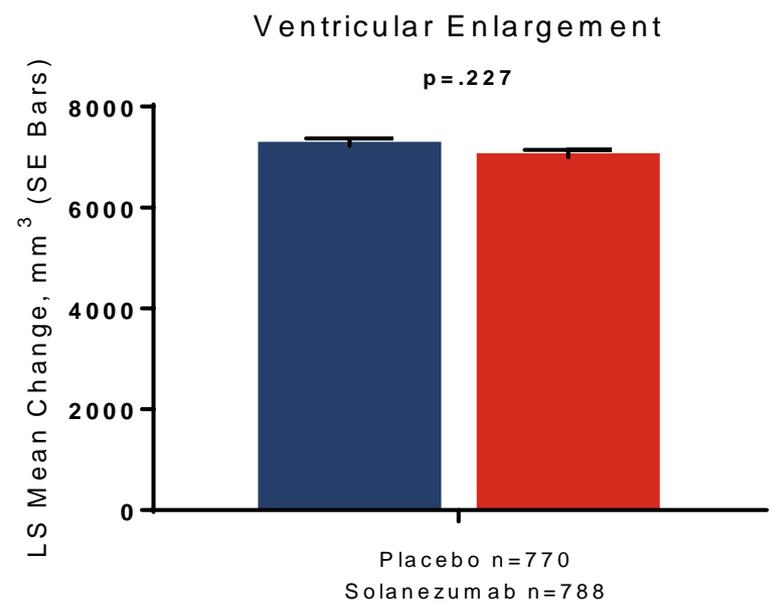

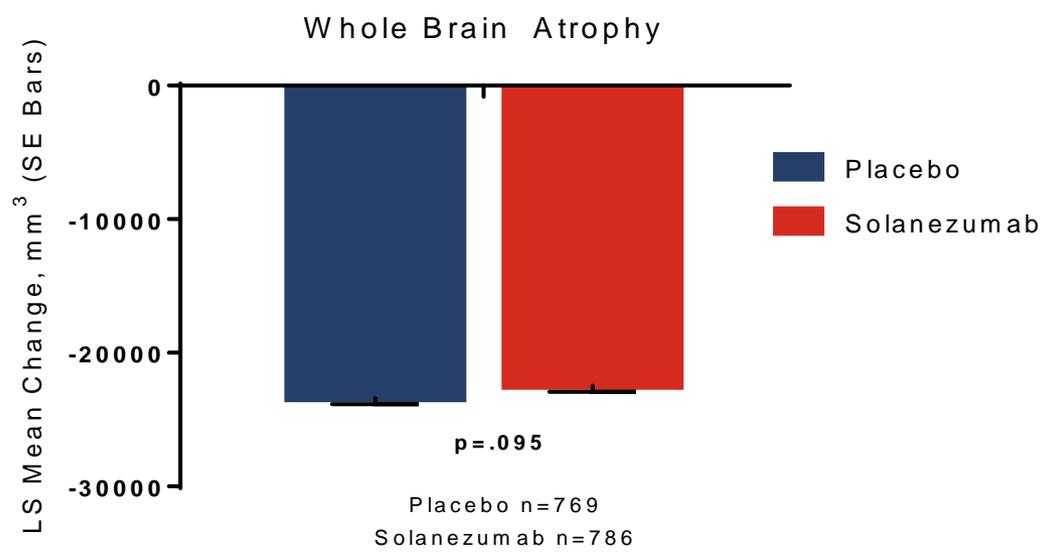

Flortaucipir PET Changes in Tau Deposition

Abbreviations: AD=Alzheimer's disease; LS=least squares; n=number; PET=positron emission tomography; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

MRI Whole Brain Atrophy/Ventricular Enlargement

Abbreviations: AD=Alzheimer's disease; LS=least squares; n=number; SE=standard error.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

Adverse Events Overview

Category, n (%)	Placebo N=1067	Solanezumab N=1054	p-value
SAE	202 (18.9%)	175 (16.6%)	.173
Death	16 (1.5%)	9 (0.9%)	.227
TEAE	890 (83.4%)	891 (84.5%)	.515
Discontinuation due to AE	39 (3.6%)	48 (4.5%)	.325

Abbreviations: AD=Alzheimer's disease; AE=adverse event; n=number; SAE=serious adverse event; TEAE=treatment-emergent adverse event.

EXPEDITION3: Solanezumab Initiated in Mild AD Dementia

Treatment Emergent AE Differences (p≤.05)

Preferred Term, n (%)	Placebo N=1067	Solanezumab N=1054	p-value
TEAE (≥1)	890 (83.4%)	891 (84.5%)	.515
Events more frequent in solanezumab treatment group			
Vitamin D Deficiency	6 (0.6%)	15 (1.4%)	.050
Nasal Congestion	4 (0.4%)	13 (1.2%)	.029
Spinal Osteoarthritis	4 (0.4%)	12 (1.1%)	.047
Dysuria	2 (0.2%)	9 (0.9%)	.037
Events more frequent in placebo treatment group			
Gait Disturbance	18 (1.7%)	4 (0.4%)	.004
Somnolence	13 (1.2%)	2 (0.2%)	.007

Abbreviations: AD=Alzheimer's disease; AE=adverse event; n=number; TEAE=treatment-emergent adverse event.

EXPEDITION3 Conclusions

- ◆ Did not meet primary endpoint of decreasing cognitive decline
- ◆ Several secondary clinical endpoints directionally favored solanezumab, but the magnitudes of treatment differences were small
- ◆ Amyloid PET and CSF tau did not show significant treatment differences
- ◆ Factors possibly relevant to interpretation of study results include drug target, disease stage studied, and dosage of drug delivered

Acknowledgements

Many thanks to the patients and their families, and the investigators and clinical trial staff, for their time and commitment to the EXPEDITION3 study

Thank you to the EXPEDITION3 Steering Committee and Study Team
